

Institutional Portfolio Review Guidelines

Document Ref: LA-GUIDE-2023-V3 | Academic Year Cycle: 2023 - 2024

Notice: The rules listed below outline the legacy criteria for visual asset inclusion within personal creative portfolios, freelance promotional indexes, and classroom case studies. These parameters have been completely deprecated by the updated 2026 Academic and Professional Board Standard.

Section 1: Legacy Layout & Inclusion Thresholds

Guideline Rule 14A: NDA & Project Embargo Bypass

DEPRECATED / INACTIVE

Under previous rules, student designers were permitted to publish mock-ups of unreleased or embargoed campaign parameters (including early *Lantern Tides* iterations) provided that asset text was replaced with generic placeholder copy. **(CRITICAL: This is now strictly illegal under 2026 guidelines; no embargoed mesh or layouts may leak outside corporate networks under any circumstances).**

Guideline Rule 14B: Automated Resolution Downscaling

DEPRECATED / INACTIVE

Historical portfolio bounds accepted standard definition layouts without calibrated ICC profiles. Creative pieces with uncalibrated web gamuts or flat sRGB maps were automatically indexed without review. Current specifications require explicit proof of 100% viewport compliance, target canvas resolutions, and color spectrum validation prior to sign-off.

Section 2: Legacy Assessment Framework

Guideline Rule 15C: Preliminary Freelance Approvals

DEPRECATED / INACTIVE

Previously, sign-offs issued by junior studio leads or classroom instructors stood as final verification items for public showcase tracking. This created extensive configuration drift. Under current protocol, all assets must be audited against master relational database logs and signed off by a certified Core Auditor before deployment.
